IMPORTANT

In addition to reading and understanding these instructions, it is strongly recommended that all operators follow the safety and maintenance guidelines set out below.

These instructions are a useful tool, specifically developed for Air Track Italia® inflatable equipment for sports use, and have the task of guiding instructors and managers of such equipment in operations relating to the safety and correct use of the products.

The instructions provide for all the operations that are essential for the correct installation, start-up and maintenance of the equipment in safe conditions of use.

For greater completeness, the following instructions also include all those operations and suggestions that allow you to keep the equipment efficient over time in safe conditions, with interventions such as periodic maintenance and inspections when necessary.

However, the instructions in the manual are not a substitute for any laws, decrees and / or regulations of the state or local administrations that must in any case be respected, but are an effective tool to reduce the risk of accidents on such equipment.

The following instructions refer to inflatable sports equipment, to be used in suitable spaces, both for permanent use and for temporary use.

1. WARNINGS

- Read and fully understand the User Manual before use: risk of serious injury, including permanent paralysis and even death, caused by landings or falls on the head or neck.
- Check the pressure and operating conditions before each use.
- Air Track Italia® products are NOT toys: supervision by a qualified adult operator is required.
- This equipment must be used ONLY by athletes and in any case ALWAYS under the supervision of a suitably trained and qualified coach / manager.
- User safety is the responsibility of the supervisor.
- The user manual is explanatory and not exhaustive, but common sense must always be used.
- Do not drag or drop the product, risk of damage.
- NEVER use the repair kit or other products on your own: always ask for instructions and authorization first from info@airtrackitalia.com

For any information **not contained** in the following instructions (eg. How to use products outdoors), please [contact us](#).

2. INSTRUCTIONS FOR USE

The following list refers to all Air Track Italia® brand equipment.

ATTENTION: always make sure that the surface on which the Air Track Italia® tools are positioned is large enough to contain them once inflated and free of objects potentially harmful to the PVC of which they are composed, both under it and in its immediate vicinity.

ATTENTION: carefully read the instructions and standards reported in the user manual of the electric and mechanical inflators before using them.

ATTENTION: Air Track Italia® tools are not toys. This is highly specific equipment designed and developed to be used within facilities suitable for carrying out sports activities, under the supervision and vigilant caution of qualified instructors and supervisors.

2.1 Valves

Air Track Italia® products are fitted with hermetic screw valves and double watertight gaskets of nautical origin.

The valves consist of two systems:

- external cap
- inner membrane

Once the external cap (first seal) has been removed, the opening mechanism of the internal membrane (second seal) is accessed.

In the closed position the air does not come out, in the open position the air comes out.

NOTE: the inflation couplings mounted on the tubes of the inflators automatically control the internal membrane, opening it once they enter the valve and closing it once they are removed.

NOTE: to ensure the hermetic seal of the products, all the valves must have the internal diaphragm in the closed position and the external cap correctly screwed.

NOTE: the following instructions are valid both for the use of the base tube and for the large flow tube, where provided.

2.1.1 Standard valves (grey 25 mm)

The opening mechanism of the inner membrane opens and closes by pressing the plastic button in the center of the valve.

2.1.2 Wide flow valves (black 40 mm)

The opening mechanism of the inner membrane opens and closes by pressing and turning the plastic button in the center of the valve.

[Watch the video!](#)

2.2 Inflation

- a. Spread the product with the use surface facing upwards and remove the external cap of a valve;
- b. Screw the inflation tube into the inflator and check that both the part that inflates (inscription *out*);
- c. Insert the end of the inflation tube equipped with a special coupling into the respective valve, ensuring it properly according to the type of coupling present.

NOTE: the coupling will automatically open the internal membrane of the valve.

WARNING: make sure that the electric inflator rests correctly on its feet and that the suction nozzle is free and away from any object or fragment that could plug it or be sucked up.

- d. Activate the inflator and wait for the product to swell, keeping it under constant control;
- e. Once the product reaches a good stiffness, remove the tube from the valve;
- f. Turn off the inflator and close the outer cap

NOTE: The inflators supplied are not able to cause any damage to the products, even if the maximum pressure is reached. However, it is advisable to proceed with caution and do not forget the inflator on, which would risk overheating.

NOTE: The electric inflators are equipped with an anti-overheating system that switches off the circuit in case of high temperature or under stress.

NOTE: In the case of a foot pump, the pressure is displayed at the same time as the inflation phase, in the pressure gauge integrated on the pump.

[Watch the video!](#)

2.3 Pressure check

- a. Remove the outer cap from a standard (grey) valve
- b. Insert the pressure gauge or the pump with pressure gauge depending on what is included in the accessories
- c. Compare with the pressure table or with the reference pressure of your product

CASE A – Excessive pressure

1. Remove the cap of another valve in addition to the one occupied by the pressure gauge
2. Press the plastic button in the center of the valve to release the air
3. Once the correct pressure has been reached, remove the pressure gauge and close the external caps

CASE B – Low pressure

1. Remove the cap of another valve in addition to the one occupied by the manometer
2. Insert the inflation coupling into the valve
3. Operate the inflator
4. Once the correct pressure has been reached, remove the hose and turn off the inflator
5. Remove the pressure gauge and close the outer caps

[Watch the video!](#)

2.4 Deflation

NATURAL

1. Remove the outer caps from all valves
2. Press and turn the plastic button so that the internal membrane locks in the open position
3. Wait for the weight of the tool itself to release all the air or roll it up expelling it

THROUGH INFLATOR

- a. Screw the inflation tube into the inflator and check that it is the part that sucks (inscription *in*).
- b. Insert the free end of the inflation tube, equipped with a special coupling, into one of the valves previously deprived of the cap.

- c. Activate the inflator and wait for the product to deflate, keeping it under constant control.
- WARNING:** during this phase it is possible that the PVC bends and plugs the valve, putting stress on the inflator; in this case, turn it off immediately and follow the advice below:
- if the product is left immobile, it will be more difficult for creases or air pockets to form and it will lower evenly;
 - if you want to minimise the time, it is advisable to proceed to roll up the product at the same time as the deflation phase, in order to always guarantee a good draft at the pump.
- d. Once deflation is complete, turn off the inflator and remove the tube
- e. Any other air can be let out or sucked in during the last phase of the rolling

[Watch the video!](#)

2.5 What to do in case of leaks

In the event that the Air Track Italia[®] equipment should show an abnormal pressure reduction, you will find below the possible causes and solutions:

1. Reduction of internal air cooling

Normal behaviour that sees the internal pressure of the product reduced due to the cooling of the air introduced by the inflator.

2. Leak from a valve

Check that the internal diaphragm of all the valves is in the closed position and that all the external plugs are inserted correctly. If so, check the tightness of the valves using the special wrench provided in the Repair Kit.

3. Leak from hole, cut or abrasion

Check for any leak by eye or using soap and water, then request assistance [by contacting Air Track Italia S.R.L.](#) or by sending your photos via WhatsApp to the number [+39 347 235 74 32](#)

3. WARRANTY

3.1 General information

- a. To use the warranty, the Customer must keep the invoice (or DDT) that he will receive with the goods. It is a good idea for the customer to check the package and the product contained in it upon arrival to verify if the product received is free from defects of any nature (it is advisable to sign with reserve to the courier, in this case there are three days of time to check the product).
- b. This product is covered by a 24-month warranty with the RTB (return to base) formula, unless extended authorised in writing, the effective date coincides with the date printed on the sales document issued at the time of purchase of the product.

The 24-month warranty pursuant to Italian Legislative Decree 24/02 applies to products with a lack of conformity, provided that the product itself is used correctly, in compliance with its intended use and as provided in the attached technical documentation. In the event of a lack of conformity, Air Track Italia will restore the conformity of the product by repairing / replacing or reducing the price, at no cost to the customer, until the contract is terminated.

If the defect does not result in a lack of conformity pursuant to Italian Legislative Decree 24/02, the Customer will be charged for any costs of verification and restoration required by the Authorised Assistance, as well as transport costs if incurred by Air Track Italia.
- c. To obtain the Technical Assistance service during the warranty period, the material shipped must be accompanied by a copy of the purchase invoice proving the purchase. Air Track Italia reserves the right to invoice the Customer for troubleshooting costs and any intervention costs relating to products sent for repair that do not have manufacturing defects attributable to the product and its original components, but defects attributable to components added by the Customer, incorrect installation, tampering, or anything else not part of the original configuration of the purchased product.
- d. In the event that, for any reason, it is unable to return a product under warranty (restored or replaced) to its customer, Air Track Italia may proceed at its discretion to return the entire amount paid or to replace it with a product of equal or superior characteristics.
- e. No damage can be requested from Air Track Italia for any delays in making deliveries, repairs or replacements.

3.2 Forfeiture of the warranty

The warranty terms expire in the following cases:

- a. neglect, abuse, misuse, incorrect or improper use and installation;
- b. cuts to the inflatable caused by the use of blades or other for unpacking;
- c. electric discharges and voltages that do not comply with the characteristics of the product, described in the manual or on the reference plates;
- d. with incorrect or improper installations, modifications that do not comply with Air Track Italia specifications;
- e. from use of non-original accessories and consumables;
- f. for tampering with the product;
- g. for any intervention by the Customer on products under warranty. Any intervention must be previously and exclusively authorised in writing by Air Track Italia;
- h. the warranty does not cover marginal defects that have a negligible effect on the value or functionality of the product (irregularities or inaccuracies) since they are handmade products;
- i. professional / intensive use of the products which causes premature wear and not manufacturing defects.

3.3 Further information

The conditions contained in this document may be changed without notice.

For more information, please write to us at info@airtrackitalia.com, or contact us by phone.

4. PRESSURE TABLE

PRESSURE TABLE

Air ROLLER	50 - 100 mBar	0,05 - 0,1 Bar
MAXI	60 - 120 mBar	0,06 - 0,12 Bar
MINI and RIMBALZINO	100 - 250 mBar	0,1 - 0,2 Bar
Air COVER and Air CUBE	150 - 250 mBar	0,15 - 0,25 Bar
Air BEAM	150 - 400 mBar	0,25 - 0,4 Bar
AirPODIUM and TRAKKINO	60 - 250 mBar	0,06 - 0,25 Bar
Max supported pressure	1800 mBar	1,8 Bar

5. RIMBALZINO / Launch PAD USER MANUAL

5.1 Correct use

- Always use the product on a rigid and protective surface (spring floor and/or carpeted surface).
- The product is equipped with velcro: always use it on an adequate surface (spring floor and/or carpeted surface) to keep it still during use.
- Always use the product at adequate pressure according to the weight and level of the gymnasts.

NOTE

If a “book fold” occurs in the central part of the product during the stop phase with consequent lifting of the external edges, the pressure of use is not sufficient. Increase the pressure to avoid damage to the product that is not covered by the warranty.

For more details watch the video: <https://youtu.be/DN5gw7W3S-Y>

5.2 Warning

DO NOT use the product directly on the floor, on arrivals or on uneven surfaces such as inside the landing pit or resting on a mattress.

5.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.

- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

6. Air ROLLER USER MANUAL

6.1 Correct use

- Always use the product on a protective surface (spring floor and/or carpeted surface, gymnastic mattresses).
- The product (registered design) features an internal tie rod system that allows it to remain upright when not in use.
- Always use the product at adequate pressure according to the weight and level of the gymnasts

For more details watch the video: https://youtu.be/MwD44_bzYiA

6.2 Warning

- DO NOT exceed the inflation pressure.
- DO NOT stand on the product.
- DO NOT use the product as a chair.

6.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.

- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

7. Air COVER USER MANUAL

7.1 Correct use

- Always use the product on an elastic vaulting board or on a rigid and protective surface (spring floor and/or run-up vaulting track).
- Always use the product at adequate pressure according to the weight and level of the gymnasts.
- Always use the original straps supplied to firmly anchor the product.
- Check the tightness of the straps at each jump of the athlete.
- Refer to all the standards used for FIG certified vaulting boards.

NOTE

If during the stop phase a “book” fold occurs in the central part of the product with consequent lifting of the external edges, the pressure of use is not sufficient: increase the pressure.

For more details watch the video: <https://youtu.be/9axevOVCgYs>

7.2 Warning

- DO NOT use the product on the vaulting board without the appropriate straps.
- DO NOT use the product directly on the floor, on arrivals or on uneven surfaces such as inside the landing pit or resting on a mattress.

7.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.

- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

8. Air BEAM USER MANUAL

8.1 Correct use

- Always use the product on a hard surface.
- Always use the product at an adequate pressure according to the weight and level of the gymnasts in order to exclude the risk of contact with the underlying surface.
- Always check the pressure table.

For more details watch the video: <https://youtu.be/jdNXbk Off4>

8.2 Warning

- DO NOT use the product on a slippery surface.
- Any deflections of the product at the first inflation are NOT a defect. Once inflated, simply flex the product from the opposite side to make it come back flat.

8.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.

- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

9. TRAKKINO / Home MAT USER MANUAL

9.1 Correct use

- Always use the product in the presence of a supervisor.
- Always use the product on a hard surface.
- If used outdoors, refer to the general warnings.
- Always use the product at an adequate pressure according to the weight and level of the gymnasts in order to exclude the risk of contact with the underlying surface.
- Always check the pressure table.

For more details watch the video: <https://youtu.be/IK7IDTQvIk0>

9.2 Warning

DO NOT use in spaces unsuitable for gymnastics.

9.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.

- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

10. Air CUBE USER MANUAL

10.1 Correct use

- Always use the product on a rigid and protective surface (spring floor and/or carpeted surface).
- Always use the product at adequate pressure according to the weight and level of the gymnasts.
- The two modules are coupled with velcro and can also be used separately.
- The presence of velcro makes it possible to overlap several modules.
- Always check the stability of the product before getting on it.

For more details watch the video: <https://youtu.be/KKjvUlnzGJU>

10.2 Warning

DO NOT use it directly on the floor.

10.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.

- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

11. AirPODIUM USER MANUAL

11.1 Correct use

- Always use the product at an adequate pressure according to the weight and level of the gymnasts in order to exclude the risk of contact with the underlying surface.
- Always check the pressure table.
- Check the stability and firmness of the velcro or joints supplied with the product, before use in combined form.
- Refer to the official videos for the various combinations that can be created.
- If used as an award podium, always check the pressure and its stability.

For more details watch the video: https://youtu.be/dXN01CNUZ_Y

11.2 Warning

NEVER place products side by side with valves in contact with each other.

11.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.

- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

12. MINI Track USER MANUAL

12.1 Correct use

Always use the product on a rigid and protective surface (spring floor and/or carpeted surface or tatami).

NOTE

If during the punching phase a book fold occurs in the final part of the product with consequent lifting of the external edges, the pressure of use is not sufficient: increase the pressure.

For more details watch the video: https://youtu.be/r4MZvxm_LnQ

12.2 Warning

DO NOT use the product directly on the floor: high risk of injury.

12.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.

- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

13. MAXI Track and MoonTrack USER MANUAL

13.1 Correct use

- Always use the product at an adequate pressure according to the weight and level of the gymnasts in order to exclude the risk of contact with the underlying surface.
- Always check the pressure table.
- To obtain a complete and uniform deflation, use the “natural” deflation simply by locking the valves in the OPEN position allowing the natural outflow of air and uniform deflation of the product (takes more time). Alternatively, you can use the standard valves and the original inflator.

For more details watch the video: https://youtu.be/G_tKHV4jIA

13.2 Warning

- Both during the inflation and deflation phases, it is necessary to be constantly present to intervene in case of need.
- WARN all those present during the deflation of the products and make sure that no one jumps on the tool: risk of serious injury.

13.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.

- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

14. MICROmat / Air STING and MICROtrack USER MANUAL

14.1 Correct use

- Always use the product on a rigid and protective surface (spring floor and/or carpeted surface).
- The product is equipped with velcro. Always use it on an adequate surface to keep it still during use (spring floor and/or carpeted surface).
- Always use the product at adequate pressure according to the weight and level of the gymnasts.

NOTE

If during the punching phase a book fold occurs in the final part of the product with consequent lifting of the external edges, the pressure of use is not sufficient: increase the pressure.

NOTE

The product is designed for high level gymnastics. The intensity of use may correspond to premature wear of the material which may not always be covered by the warranty. Air Track Italia S.R.L. however, it undertakes to always offer maximum support.

For more details watch the video: <https://youtu.be/enqW7dGD1bE>

14.2 Warning

DO NOT use the product directly on the floor, on arrivals or on uneven surfaces such as inside the landing pit or placed on a mat.

14.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.

- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

15. SPIKKIO / Air CHEESE USER MANUAL

15.1 Correct use

- Always use the product on a protective surface.
- You can use the product on gymnastic mattresses.
- Always use the product at adequate pressure according to the weight and level of the gymnasts.
- Always check the stability of the product before use.

NOTE

The hitting phase must be done only on the area marked with the black dot.

For more details watch the video: <https://youtu.be/TaeKT25iVvs>

15.2 Warning

- DO NOT exceed the inflation pressure.
- DO NOT jump on the edges of the product: this will cause premature wear of the material.

15.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.

- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

16. UPIT Foam USER MANUAL

16.1 Correct use

- The product must be filled with n. 2 foam block fills. The use of non-original filling is not recommended.
- The product must be MANDATORY placed on a gymnastic mattress with measures 200x400x20 cm. Alternatively, it can be used on spring floor or other protective floors, if used by athletes with low weight or who perform difficulties with reduced elevation.
- Ventilate and handle the filling often (the blocks tend to get stuck on the bottom), so that at each jump the effect of the protection guarantees safety for everyone.
- The front net can be removed to be used under the parallel bars, for particular exercises or with kindergarten courses.
- The pressure can be chosen according to use: if used for assistance, inflate to a higher pressure, this will give more stability; if used with basic courses, it is recommended to keep the structure softer.
- It is possible to use the product with an exercise mattress on it (as a rise) but it must first be closed with the appropriate net.
- It is possible to store the product against a wall only after having “closed” it with the supplied net to prevent the filling blocks from falling.
- The “closing” net can be completely removed in case of use of the product from the back, as a prerequisite, in combination with the big cube.
- It is advisable to remove the filling blocks and sanitise the bottom of the landing pit every six months.
- The replacement of the filling blocks is based on the frequency of use also for hygienic reasons (presence of bacteria, dirt, etc.).
- The front of the product is designed to be wider than the back, so it is possible to make a little effort to close the front net.
- Always jump one at a time.

For more details watch the video: <https://youtu.be/NIVsSM6zTig>

16.2 Warning

- DO NOT jump to and from the edge.

- DO NOT stand on the edge.

16.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

17. UPIT Cloud USER MANUAL

17.1 Correct use

- Check that the inflation tube is properly connected to the product structure.
- Check that the tube is firmly connected to the inflator port through the supplied strap.
- Check that the air blower is connected to electricity with the cable, that it is not at risk of disconnection and that it is switched on steadily.
- Check that both the inflation zippers and the velcro of the pit on the back are CLOSED before use.
- Make sure that the product does not slip. Lock it with the appropriate hooks.
- You can use the product on the floor.
- The presence of an instructor is mandatory.
- Always jump one at a time.
- It is possible to use the product at a reduced pressure thanks to small openings with Velcro fasteners: lift the flaps and fold them in order to release the air flow, then close them to block it.
- During the deflation phase, an exercise mattress can be placed on top of the product to facilitate the total escape of air from the internal system.

For more details watch the video: https://youtu.be/8QrL_NBopHY

17.2 Warning

- Check that the inflator grids are always clean, therefore free of excessive dust or other debris inside the filters. If necessary, clean periodically.
- In the event of a sudden loss of power, immediately stop using the product.

17.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.

- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
- NEVER use the repair kit or other products independently: always ask for instructions and authorization first from info@airtrackitalia.com
- NEVER leave the product in the sun for a long time.
- DO NOT drop the product or rest on the valve.
- DO NOT jump at the valve: risk of injury and breakage of the same with immediate loss of product pressure.
- DO NOT overuse chalk. This tends to dry out the PVC and cause it to crack prematurely.
- DO NOT jump on the product both during inflation and deflation and make sure that no one can do it distractedly. Risk of serious injury.
- DO NOT jump on the edges of the product, it will cause premature wear of the material.
- When cleaning, always eliminate all residues on the surface and use neutral detergents.
- CORRECT use considerably reduces the likelihood of injury and guarantees a longer product life.
- Damaged packaging or any imperfections, folds, asymmetries on the products are not to be considered a factory defect as they do not compromise the correct functioning of the products which are handmade, so each item is unique and never perfectly identical to another.
- Always use the products in positions considered safe with respect to the exercises that will be performed and with the appropriate protections placed near them or in the areas used for landing / falling.
- Always use the products on regular and clean surfaces, free of sharp objects that could puncture the inflatable products. If used outdoors, it is always recommended to use a protective layer such as carpet.

18. RIALZONE USER MANUAL

18.1 Correct use

- The product is designed to be used with a 200x400x20 cm gymnastic mattress on the top.
- Check that the tube is firmly connected to the inflator body.
- Check that the tube is firmly connected to the pump.
- Check that the pump is properly connected to electricity.
- Make sure the deflation zippers, especially the main one, are secure.
- The product consists of 3 chambers: the upper one always remains inflated, the middle one and the base can be deflated according to work needs.
- The product can be used inside the pit, taking care not to pull the tube.
- It is recommended to use the product with a gymnastic mattress fixed at the front with velcro and with bottom corners.
- It can be used with an exercise mattress on top.

18.2 Warning

- Verificare che le griglie del gonfiatore siano sempre pulite, quindi prive di eccessiva polvere o altri detriti all'interno dei filtri. Se necessario pulire periodicamente.
- In caso di improvvisa perdita di corrente, sospendere immediatamente l'utilizzo del prodotto.

18.3 General warnings

- Read and fully understand the User Manual before use – risk of serious injury.
- Frequently check the pressure and operating conditions.
- This product is NOT a toy: supervision by a qualified adult operator is required.
- You and the safety of other users are your responsibility.
- The user manual is explanatory, but common sense must always be used.
- DO NOT drag or drop the product, risk of damage.
